DISPLAY SCREEN EQUIPMENT

An interactive training course on Display Screen Equipment

This interactive learning course is to make staff **aware of the hazards of working with Display Screen Equipment** and their responsibilities for ensuring that control measures are in place to reduce the risk from the hazards to ensure the safety of themselves, colleagues and everyone in the workplace.

The course details the steps of a Workstation Assessment and how to complete the assessment as it relates to their job. The training message is delivered

...training for success

Having completed the tutorial, a random assessment test is generated and the course records the Learner's progress providing an auditable trail of results and a **certificate** of completion can be printed for successful students.

My SafetyNet courses...

- Have the course customized to reflect your company's corporate identity, site requirements and company policy.

ered in a positive mode to ensure all trainees are aware of the safety procedures and know where to get information should they be required to.

The **"safety is a state of mind"** and **"no one works to get hurt"** culture is reinforced throughout the course.

The learning design adopted ensures effective engagement of the Learner by continued interaction utilizing screen prompts to guide the trainee through

This certificate provides evidence of the underpinning knowledge required prior to completing a workplace assessment to prove competence.

the course and those with little or no computer experience will find it easy to use.

- A **cost effective** solution to your training and ongoing assessment requirements.
- **Recorded evidence of training** covering safe working practice and legal compliance.
- **Progress and achievement** that is measurable.
- **Consistent, reinforced** auditable training.

This accreditation of prior learning **can contribute** towards **NVQs**.

Make your Site a Safety Zone - Keep it Safe and Legal

- Delivery of training can be configured to suit individual company IT requirements.

- Course accreditation can either be in - house or external (e.g. IOSH or ROSPA) depending on your particular requirements.

A cost effective solution to your training

Interactive Scenarios

Regardless of the subject matter, all of the learning material that we develop is designed to engage, motivate and challenge the learner through the use of interactive screens which help to improve trainees' knowledge retention.

We are now enhancing the learning environment within our courses by adding course specific interactive scenarios that encourage the

learner into interactive play further improving the knowledge transfer.

The courses and modules that we create can be used for standalone or as part of a blended learning approach and much of the materials have been designed with both purposes in mind.

Well designed learning materials can be used in many different scenarios, maximising your investments.

A screenshot of an interactive training scenario. The background is a 3D-rendered office with a fire burning on a sofa. A man in a suit is on the left, looking distressed. A green text box on the left contains instructions: "The priority is to raise the alarm and allow people to evacuate to a safe area as quickly as possible. Once the people are safe Security should be called on 123 and then the fire tackled with an extinguisher (if you are trained and if it is safe to do so) or the fire brigade can be called." A dark blue question box asks "What action should you take immediately if you discover a fire?". Below it are four options: "Phone security", "Use a suitable fire extinguisher", "Sound the alarm", and "Use a lift". A red fire alarm pull station is highlighted with a yellow circle on the right. A fire extinguisher is visible in the bottom right corner.
