HAZARD IDENTIFICATION AND RISK ASSESSMENTS

## An interactive training course on Hazard Identification and Risk Assessments

This interactive learning course is to make staff **aware of the H&S hazards** that the workplace can contain and their responsibilities for ensuring that control measures are in place to reduce the risk from the hazards to ensure the safety of themselves, colleagues and everyone in the workplace.

The course details the 5 steps of a Risk Assessment and how to complete a workplace assessment it also explains how a risk assessment relates to their jobs. The training message is delivered in a posi-

tive mode to ensure all trainees are aware of the safety procedures and know where to get information should they be required to.

The "safety is a state of mind" and "no one works to get hurt" culture is reinforced throughout the course.

The learning design adopted ensures effective engagement of the Learner by continued interaction utilizing screen prompts to guide the trainee through

the course and those with little or no computer experience will find it easy to use.

- A **cost effective** solution to your training and ongoing assessment requirements.
- **Recorded evidence of training** covering safe working practice and legal compliance.
- **Progress and achievement** that is measurable.
- **Consistent, reinforced** auditable training.

## ...training for success

Having completed the tutorial, a random assessment test is generated and the course records the Learner's progress providing an auditable trail of results and a **certificate** of completion can be printed for successful students.

This certificate provides evidence of the underpinning knowledge required prior to completing a workplace assessment to prove competence.

This accreditation of prior learning **can contribute** towards **NVQs**.

## Make your Site a Safety Zone - Keep it Safe and Legal

### My SafetyNet courses...

- Have the course customized to reflect your company's corporate identity, site requirements and company policy.
- Delivery of training can be configured to suit individual company IT requirements.
- Course accreditation can either be in - house or external (e.g. IOSH or ROSPA) depending on your particular requirements.

## A cost effective solution to your training

### Interactive Scenarios

Regardless of the subject matter, all of the learning material that we develop is designed to engage, motivate and challenge the learner through the use of interactive screens which help to improve trainees' knowledge retention.

We are now enhancing the learning environment within our courses by adding course specific interactive scenarios that encourage the

learner into interactive play further improving the knowledge transfer.

The courses and modules that we create can be used for standalone or as part of a blended learning approach and much of the materials have been designed with both purposes in mind.

Well designed learning materials can be used in many different scenarios, maximising your investments.

A screenshot of an interactive training scenario. The background is a 3D-rendered office with a fire burning in a fireplace. A man in a suit is on the left, looking distressed. A green text box on the left contains instructions: "The priority is to raise the alarm and allow people to evacuate to a safe area as quickly as possible. Once the people are safe Security should be called on 123 and then the fire tackled with an extinguisher (if you are trained and if it is safe to do so) or the fire brigade can be called." A dark blue question box asks "What action should you take immediately if you discover a fire?". Below it are four options: "Phone security", "Use a suitable fire extinguisher", "Sound the alarm", and "Use a lift". A red fire alarm pull station is highlighted with a yellow circle on the right wall. A fire extinguisher is visible in the bottom right corner.

## HIRA Course Modules

- Understand the Management of H&S regulations.
- How Risk assessments relate to their work.
- 5 Steps of an Assessment.
- Filling out a risk assessment.

### Remember....

- An Assessment.
- Checkpoint Quiz

## Company Specific Scenarios

We can also create scenarios for your company to reflect specific hazards and situations relevant to your industry.
